## 1. Introduction and Background

The City of Ryde proudly acknowledges the presence of significant trees within the Ryde Local Government Area (LGA) that have established on the traditional land of the Wallumedegal people.

Significant trees play a very important part in the natural and cultural landscape within the City of Ryde. They not only enrich Ryde's heritage and distinctive character but also contribute to a healthier and more aesthetically pleasing environment. The Significant Tree Register (The Register) was created as a commitment to the recognition and preservation of trees with unique historical, cultural or botanical significance and also acknowledges the significant value of Avenue plantings and stands of trees. The Register encompasses trees within public spaces and privately owned properties and offers guidelines for their responsible management and ensuring their protection for future generations.

The Register is not a static document, it continually evolves as trees naturally reach the end of their life cycle and new additions are recognized. The City of Ryde has engaged in consultations with a range of sources, both public and private, to identify trees worthy of significant status and the associated protection. Though existing protection measures are provided through the Development Control Plan (DCP) 9.5 the Significant Tree Register complements this by offering additional protection.

The City of Ryde remains steadfast in its commitment safeguard these vital trees and their surrounding landscapes. These trees carry a rich historical and cultural legacy and often hold a special place in the hearts of our community. As we work towards nurturing and expanding our urban forest, we place significant emphasis on preserving our most remarkable and historically significant trees, recognising the countless benefits that trees and plants bring to our city's well-being.

## 2. Purpose of Register

The Significant Tree Register includes trees on public and private land. It aims to recognise and protect the exceptional trees that exist in the City of Ryde. The Register is a compilation of trees that have been nominated by the community, organisations, property managers, Council staff and tree owners. The assessment of significant trees is based on accepted assessment criteria consistent with industry standards and are assessed by a panel of Council Australian Qualification Framework (AQF) Level 5 Arborists.

The register is aimed at recognising and celebrating City of Ryde's significant trees. Its primary objective is to promote and raise awareness of the exceptional trees within this document and offer a guideline for the future planning, protection, and management of these trees. The Register operates as a centralised data base, providing detailed information about each tree and its significance. Utilizing online platforms and new technology the Register leverages information to enhance community awareness.

Despite being listed on The Register, it's important to note that this does not imply no work can be undertaken or that removal is necessarily prohibited. For significant trees on private land approval for maintenance or minor pruning is processed via Council's Tree Management Application process. However, requests for removal will only be approved through a Development Application (DA). For Trees on public land pruning or maintenance work must be specified by a Council Tree Management Officer and tree removal requires an independent consulting arborist report confirming the tree's non-viability.

### 3. Assessment Criteria

An assessment of significance establishes the importance of a tree and identifies trees that have qualities of significance. All potential listings are subject to an arboriculture inspection by a Council Tree Management Officer and a determination of relative importance is made with reference to the established assessment criteria.

The assessment is based on the importance of the following categories:

1. [Outstanding visual or aesthetic Significance](#)
2. [Historical and/or Commemorative Significance](#)
3. [Social Significance](#)
4. [Botanical/Horticultural Significance](#)
5. [Significant Ecological Value](#)

Detailed assessment criteria against each category are outlined below.

1. [Outstanding visual or aesthetic Significance](#)
  - Trees that are outstanding for their height, trunk diameter or canopy spread.
  - Trees that occur in a very prominent location or context.
  - Trees that contribute significantly to the landscape in which they grow [including streetscapes, parks, gardens or natural landscapes].
  - Trees that exhibit an unusual growth form or physical feature, including unusually pruned forms.
  - Trees that exemplify an important and valued taste or landscape style.
2. [Historical and/or Commemorative Significance](#)
  - Indigenous significance.
  - Trees that are associated with public significance or important historical and commemorative events.
  - Trees associated with a heritage listed place and representative of that same historic era.
  - Trees that are particularly old or vulnerable.
  - Trees that are associated with or planted by a significant person or group of persons.
3. [Social Significance](#)
  - Trees that have strong or special associations with a particular community or cultural group for reasons of strong religious, spiritual, cultural or other social associations, including trees associated with aboriginal heritage and culture.
  - Trees that are important to the local community and/or are important to a community's sense of place.

#### 4. Botanical/Horticultural Significance

- Rare or uncommon species.
- Unusual growth form.
- Outstanding horticultural or genetic value.
- Could be an outstanding important source of propagating stock. This could include specimens that are particularly resistant to disease or climatic extremes or have a particular growth form.
- Specimen particularly resistant to disease or exposure.
- Outstanding size or remarkable example of its species.

#### 5. Significant Ecological Value

- Rare, threatened or locally uncommon species or ecological community.
- Indigenous remnant trees that predate the urban development in its immediate proximity.
- Trees that make a significant contribution to the integrity of an ecological community, including its role as a seed source or specialised habitat.
- A remnant specimen now reduced in range or abundance, which indicates the former extent of the species, or particularly range limits.
- Trees which provide a significant habitat element for rare, threatened or locally uncommon or common native species.

## 4. Responsibilities

After a tree has been adopted by Council for inclusion on The Register, there are a number of responsibilities both for Council and the owner of the tree regarding the maintenance and preservation of the listed tree.

### 1. Owner's responsibilities

- Owners would be expected to maintain and preserve the listed tree.
- Council will require a Tree Management Application from the owner for any routine maintenance works, such as pruning, however the application fee will be waived in this instance.
- In situations where an owner wishes to remove a tree listed in The Register a Development Application (DA) will be required, regardless if the removal is to facilitate a development.
- There will also be a mandatory requirement for a report to be provided in all situations where tree removal is requested.
- Prior to the commencement of any works on a tree listed in the Significant Tree Register, an owner would be required to nominate the person, listing their qualifications, who will be undertaking the work.

### 2. Council's responsibilities

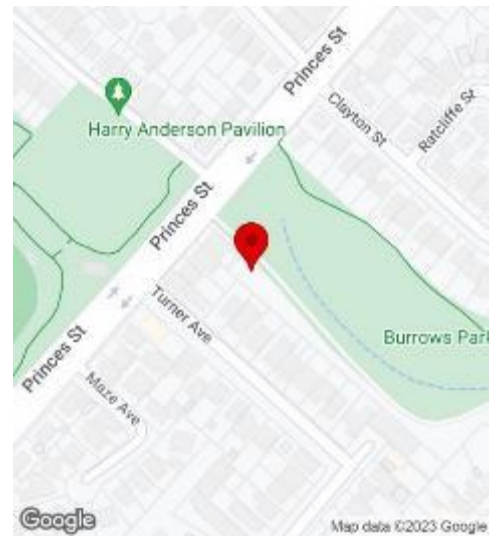

- Re-assessment of the tree will be undertaken approximately every five years.

## 6. Appendices

### 1. Appendix A – Legislation

#### Environmental Planning & Assessment Act 1979

The *Environmental Planning and Assessment Act 1979* provides Council with the power to protect vegetation through LEPs and DCPs. This legislation must be considered by Council when assessing Development Applications. Development consent must be obtained from Council for work that may impact protected vegetation.

#### State Environmental Planning Policy (Biodiversity and Conservation) 2021

The *State Environmental Planning Policy (Biosecurity and Conservation) 2021* contains planning rules and controls for the clearing of native vegetation in NSW or land zoned for urban and environmental purposes. There are also provisions that seek to protect and preserve bushland within public open space zones and reservations.

#### State Environmental Planning Policy (SEPPs)

The *State Environmental Planning Policy (Exempt and Complying Development Codes) 2008* allows for complying development, subject to compliance with the appropriate standards. A Complying Development Certificate cannot be used for the removal of a tree if the tree is a heritage item or listed on a Significant Tree Register.

#### Development Control Plan (2014)

Council's Development Control Plan (2014) outlines Tree Management Controls relating to development proposals and tree management applications.

#### Significant Tree Register

The Significant Tree Register recognises trees with significant historical, cultural, landscape or botanical importance. Listing within the register increases protection, particularly with regards to development.

## 2. Appendix B - Process for additional trees to the register

Management of the Register is delegated to the Directorate responsible for tree management in accordance with the Development Control Plan Part 9.5 – Tree Preservation.

For the purpose of this register, 'Significant Trees' may be classified as a single tree or a grouping of trees. They may possess values relating to their visual, botanical, cultural, commemorative or other significance as defined in the approved category list outlined in part three (3) of this document. For a tree/s to be considered for this register, it must satisfy a minimum of two selection criteria.

Nominations for trees on private land can be made at any time via the approved nomination form (Appendix C) and payment of the relevant fee. Public trees can be added at any time with the approval of Council's expert panel.

Council's criteria for listing a tree/s is based on a qualitative assessment of its value and worth. This limits subjectivity and provides a robust and in-depth selection process.

Council's expert panel undertakes the following upon receipt of a nomination:

- Conducts a thorough Visual Tree Assessment (VTA) of the nominated tree.
- Assesses the tree/s species in relation to its natural occurrence.
- Assesses the cultural history through reports, photographs, archival material and oral evidence.
- Evaluates the collected data against the approved criteria for determination.

In cases where an objection for a nominated tree/s on private property is made, Council's expert panel will review the nomination in question with this as a consideration. It will however ultimately determine whether the subject tree/s will be placed on the register.

Where required, additional Council staff members may be added to the panel when specialist technical knowledge is required. This may be a staff member with experience in Town Planning, Heritage or Environmental Management.

Upon completion of assessment by Council's expert panel, the nominee will be advised of the outcome in writing. If the tree/s has been accepted, the significant tree register will be updated to reflect the panel's decision.
