FIGURE 3 TRIAL CLOSURE DETAILS

FIGURE 4 TRAFFIC VOLUMES

### 1. Introduction

Development Consents (DA and S96) have been granted for development of the Bunnings site on a staged basis comprising:

Stage 1	Stage 2	Stage 3
Bunnings	Bunnings	Bunnings
Child Care Centre	Child Care Centre	Child Care Centre
Retained Building E, F & G	Bulky Good (Part)	Bulky Goods
	Retained Building F & G	

The Bunnings site (Figure 2) has extensive frontages to Victoria Road, Frank Street and College Street. There are industrial and educational uses on the opposite of the Frank Street frontage and industrial uses on the opposite side of the College Street frontage with residential frontages extending along both sides of College Street to the east.

There are extensive existing industrial buildings on the Bunnings site some of which have already been demolished to "make way" for the proposed development.

Due to expressed community concerns in relation to the potential traffic implications of the proposed development as well as other approved and impending developments in the Gladesville area Council engaged Bitzios Consulting to undertake a comprehensive study of the area (Gladesville Traffic and Parking Study). Bitzios held a community forum in August 2014 and one of the identified "treatments" for assessment in the study was the introduction of a road closure in College Street to prevent through traffic movements.

Consent Conditions No. 4, 5 and 6 of the approval for the Bunnings development relate to the requirements for the introduction of a Trial Full Closure of College Street with:

### TRANSPORT AND TRAFFIC PLANNING ASSOCIATES

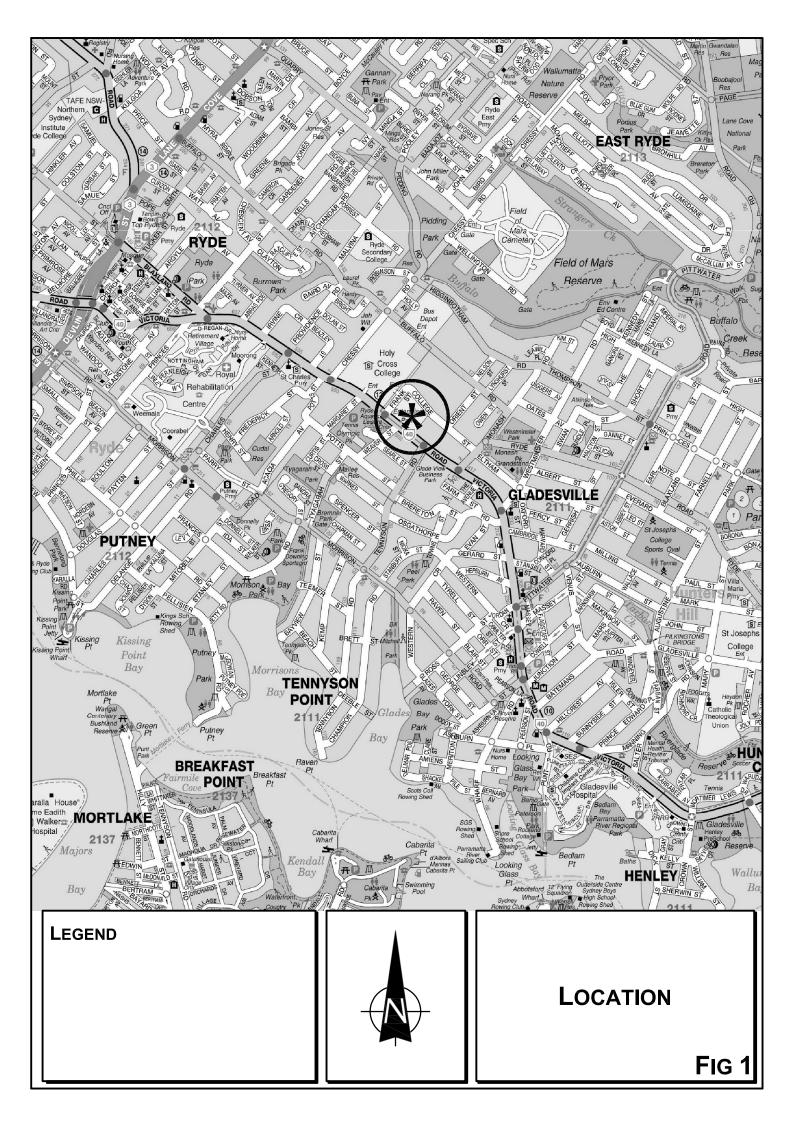

- Preparation and approval of a Traffic Management Plan (for the closure)
- Implementation of the trial closure to Council's satisfaction prior to the commencement of demolition works
- Review of the trial closure 12 months after completion of the modification works at the Victoria Road and Tennyson Road intersection

The process for the trial closure included the undertaking of community consultation and advertising campaigns as well as traffic surveys:

- prior to closure
- immediately after closure
- at 3 monthly intervals following the closure

The purpose of this report is to document a Post Implementation Review of the trial closure of College Street.

The following review has been requested at this time by Ryde City Council officers, notwithstanding the actual wording of Condition 6 which requires this review to occur 12 months after operation of the proposed Tennyson Road intersection.

### 2. DETAILS OF THE TRIAL CLOSURE

### 2.1 ACTIONS PRIOR TO TRIAL CLOSURE

- Early 2014 Council commissioned the Bitzios 'Gladesville Traffic and Parking Study'
- August and November 2014 Council convened community forums to discuss the proposed closure and solicited submissions from the community
- Council received 515 submissions and these were considered and summarised with the great majority indicating support for the proposed closure
- 28.4.15 Council resolved to adopt the findings and recommendations of the Bitzios Study including the proposed trial closure of College Street in conjunction with the Bunnings development
- 25.10.15 the Sydney East JRPP having considered the outcome of the community consultation process, the results of the Bitzios Study and Council's resolution of 28.4.15, resolved to approve the Bunnings Development Application.
- February 2016 a Traffic Management Plan for the trial closure (as required by Consent Condition No. 4) was prepared, submitted to and approved by Council and this included the completed RMS TMP PROFORMA which is reproduced in Appendix A.
- A Communications and Consultation Strategy was documented (see Appendix B) and adopted for implementation of the trial closure and subsequently enacted for the trial closure. This included a "letter box drop" to all properties in the affected area and advertisements in the local newspaper advising of the proposed closure and the intended implementation date. Details are provided in Appendix C.

### 2.2 DETAILS OF TRIAL CLOSURE

Details of the arrangements for the implementation of the trial closure are provided on Figure 3 which included:

- Preformed concrete "Jersey kerb" sections with a section of chain (locked)
- NO STOPPING restrictions
- NO THROUGH ROAD signage
- Temporary advance VMS signs (before and after closure)

The closure was implemented on 6.11.2016 and in the following months at the request of Council officers a number of minor changes and additions were made principally including provision of additional bollards and signage.

### 2.3 ACTIONS FOLLOWING TRIAL CLOSURE

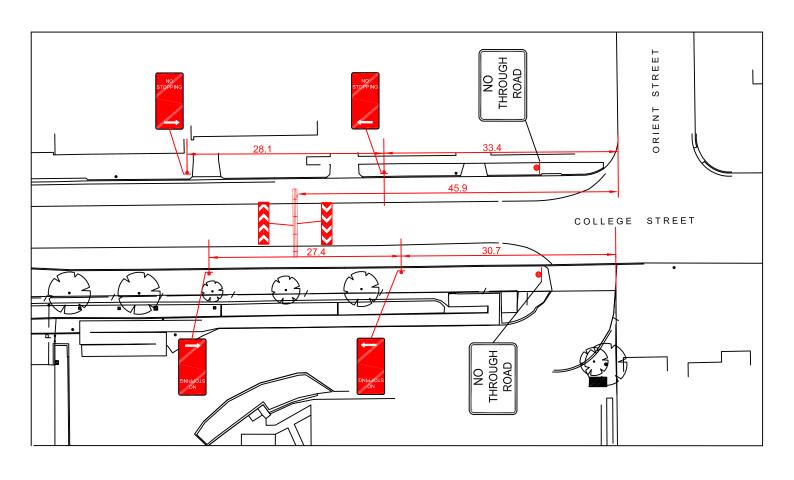

The Communications and Consultation Strategy continued with the 1800 info line for 4 weeks, VMS signs remained for 4 weeks and a Community Consultation Summary was prepared summarising the community "feedback". An extract from this summary is provided in Appendix D while the "4 Week Review" is reproduced in Appendix E.

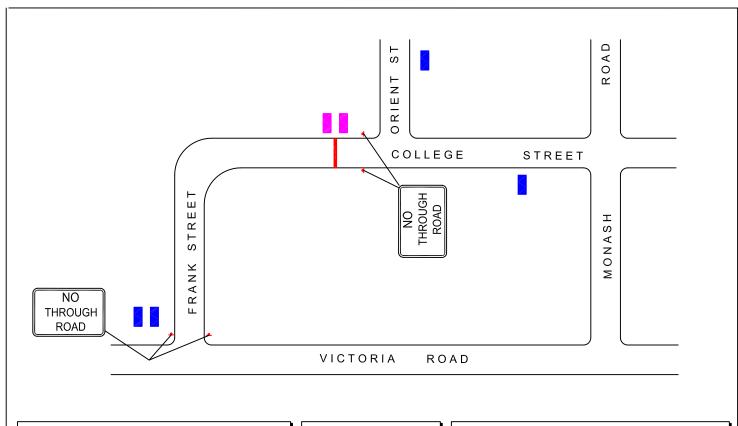

### 2.4 DATA COLLECTION

It is a requirement of the approved Traffic Management Plan (Rev G) that traffic surveys be taken to document the traffic movement circumstances prior to and immediately after the closure and at 3 monthly intervals after the closure for a 12 month period. The approved TMP (page 5) specified that the surveys be undertaken:

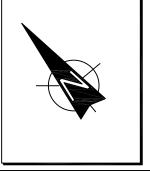

- in Cressy Road north of Victoria Road
- in College Street east of Orient Street
- in Orient Street north of College Street

These surveys were undertaken by the specialist survey company CFE Technology with 7 day/24 hours automatic "tube" recordings.

PROPOSED ROAD CLOSURE DETAILS

FIG 3

## 3. BITZIOS ASSESSMENT & CONSULTATION STRATEGY

### **Bitzios Assessment**

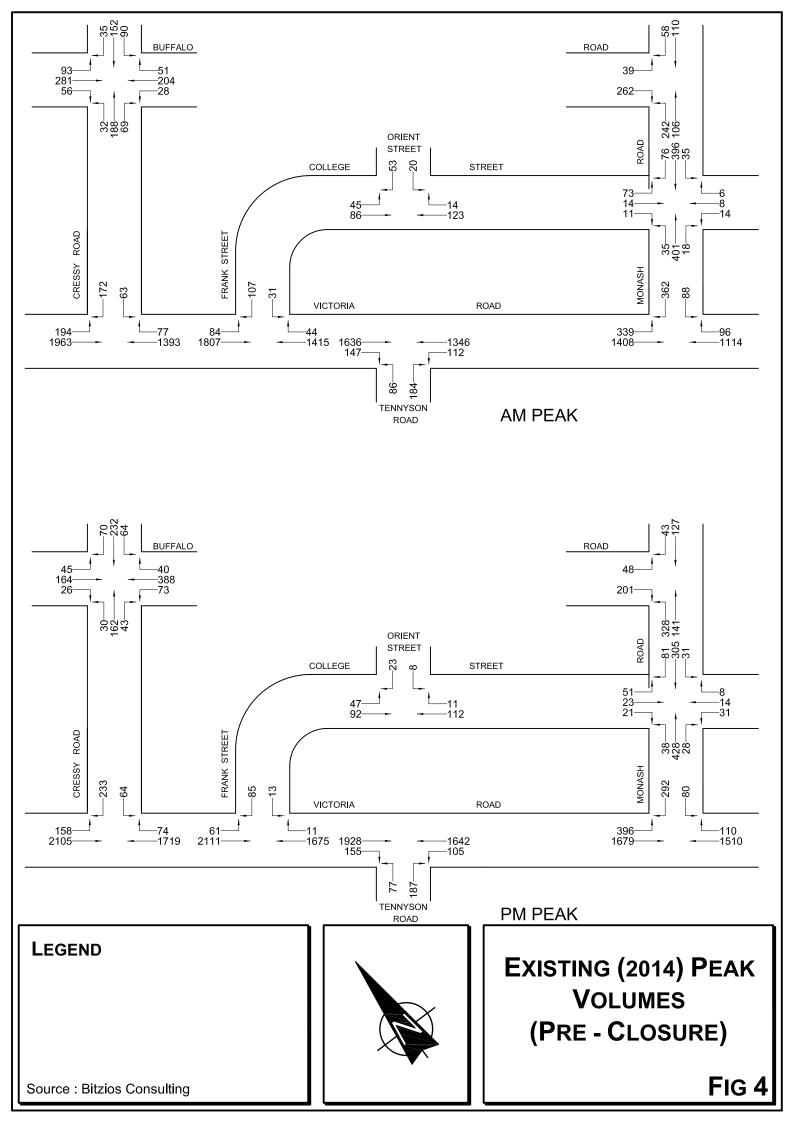

Assessment of the potential traffic implications of the proposed road closure were the subject of the Bitzios Traffic Study. Pertinent details and conclusions of that study are provided in the extracts reproduced in Appendix F while the AM and PM peak movement volumes recorded in 2014 at intersections in the vicinity of the proposed road closure are reproduced from the study in Figure 4.

A principal conclusion of the study was that the proposed road closure could be implemented without any adverse traffic implications.

### **Consultation Strategy**

As can be seen in Appendix E, the trial "Full Closure" has been noted as having negative and/or significant impacts on the respondents of the post Consultation review.

It should be noted that the majority of those that contacted Bunnings or Council were complaining of the inconvenience.

## 4. ASSESSMENT OF TRAFFIC IMPACTS

Assessment of the traffic impacts of the trial closure is provided by the results of the 24/7 automatic traffic surveys undertaken on Cressy Road (as specified in the Consent) prior to the closure implementation and 3 monthly intervals after the closure. This comparison is provided in the following for the "before" surveys (October 2016) and the "after" surveys in February, May, July and November 2017.

College Street – East of Orient Street

\* BD Total Both Directions

NB Northbound etc.

<sup>\*\*</sup> the times of single direction peaks do not always correspond with the times of the bidirectional peak therefore the sum is not equal

<sup>\*\*\*</sup> full copies of the CFE recordings have been provided to Council on an ongoing basis with each 3 monthly report

### TRANSPORT AND TRAFFIC PLANNING ASSOCIATES

These traffic surveys were undertaken in accordance with the Consent requirements and the trial road closure would have its most direct impact on Cressy Road, however the results indicate:

- overall movements in Cressy Road have only marginally increased since the closure
- the numbers of north and southbound movements have varied with <u>more</u> northbound movements in the AM, but <u>less</u> southbound movements in the AM
- the above is reversed in the PM with a slight increase in southbound and decrease of northbound movements
- movements (total and in any direction) have substantially reduced since closure of College Street

The approval terms for the trial closure did not specify that traffic surveys be undertaken in Frank Street however subsequently Council officer have requested that a survey and assessment process be undertaken in relation to the impact of the trial closure on traffic movements in Frank Street.

In order to undertake this assessment, the following data has been obtained:

- RMS SCATS count data for vehicles in Frank Street approaching Victoria Road for 1 week (Mon – Fri)
- CCTV recording of egress queues in Frank Street for 1 week (Mon Fri 8.00am
   9.30am and 2.30pm 6.00pm)
- Traffic counts and observations of vehicle movements ingressing and egressing the school on Frank Street
- Traffic counts at the Victoria Road/Frank Street intersection during the AM and PM peak periods for 1 weekday (to enable SIDRA modelling)

The RMS SCATS count data was obtained for 1 week periods before and after the introduction of the closure and this is reproduced in Appendix G.

### TRANSPORT AND TRAFFIC PLANNING ASSOCIATES

The "before" and "after" Frank Street 'approach' volumes for the AM peak (7.00-8.00 & 8.00-9.00) and PM peak (3.00-4.00, 4.00-5.00 & 5.00-6.00) have been summarised in the graph form which is provided overleaf. It can be seen that overall there has been a general increase in the volume of vehicles egressing Frank Street in these periods which include the peak school drop off and pick up times.

The CCTV recording of queues on the Frank Street approach movements were recorded for the periods 8.00 - 9.30am and 2.30 - 6.00pm for 1 week in March. The results of those surveys are provided in Appendix H and indicate that queue "spikes" of up to 18 cars occurred for the right turn movement out of Frank Street in the period 3.00pm - 3.30pm. A closer analysis of the Monday and Wednesday results for this period reveal that a significant number of cars were still queued at the end of the green signal to Frank Street. See Appendix H.

The surveys at the school driveway on Frank Street (Appendix I) revealed:

- A peak of 122 vph accessing between 8.0 9.0am (54 entering and 68 exiting)
- A peak of 159 vph accessing between 3.45 4.45pm (44 entering and 115 exiting)

The results of the peak period traffic counts undertaken at the Victoria Road/Frank Street intersection in March are provided in Appendix J and a SIDRA assessment has been undertaken to analyse the operational performance of this intersection for the "post closure" circumstance. The SIDRA assessments include a vph basis as well as the 15 minute School egress peak.

The results of the SIDRA assessments are provided in Appendix K and summarised for the vph basis in the following:

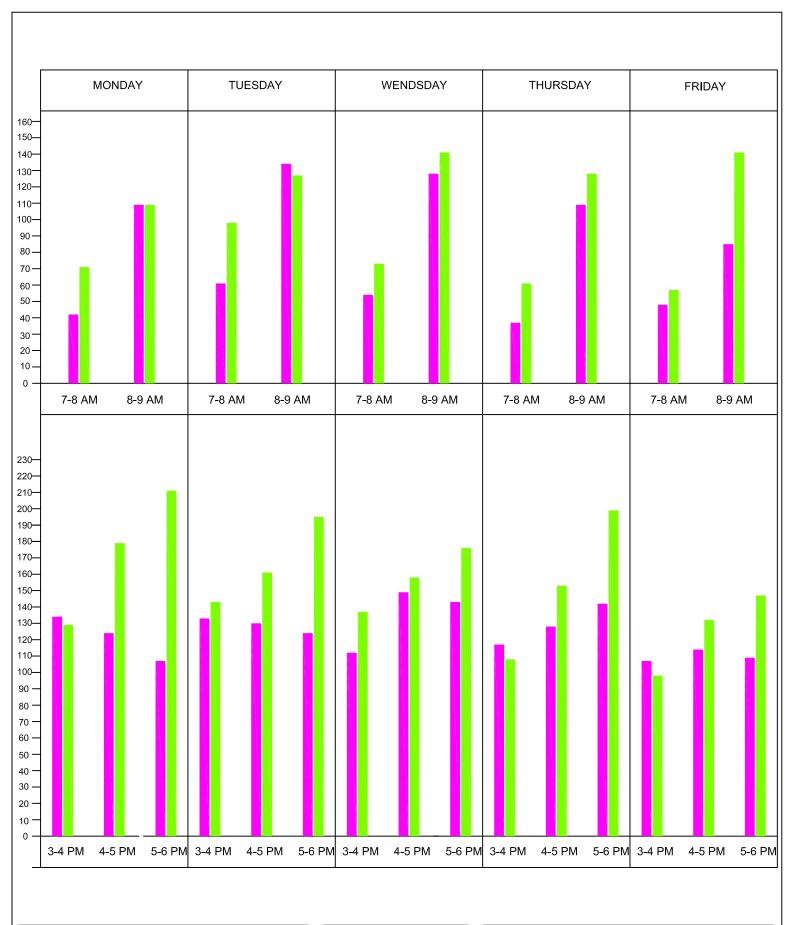

SIDRA Results	AM		PM
See Appendix K	8 – 9	3 – 4	4.30 - 5.30
LOS	А	А	А
AVD	4.0s	4.7s	7.1s
Frank Street RT	F	F	F
Frank Street Queue	49m	64m	78m

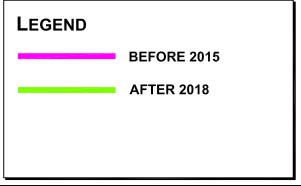

The results indicate that while the intersection has an overall LOS A, the Frank Street right turn movement has a LOS F and the queuing results largely reflect the results of the queue surveys.

There is no record available of any queuing which may have occurred in Frank Street in the afternoon school departure period prior to the closure. However, the graph comparison of the RMS SCATS count data provided overleaf for before and after closure reveals relatively minor change in the egress volumes during the 3.0 to 4.0 pm period. The results of the intersection survey reveal that the total approach movement in Frank Street is relatively consistent between 2.30pm and 6.00pm with the 1 hour peak occurring in the 4.30-5.30 period (worker departure).

However, the survey results reveal an increase in the right turn movement out of Frank Street between 3.15 and 3.30pm (school departure) and this movement conflicts with the movement of school children crossing Victoria Road on the western side of Frank Street. This right turn movement is held on "red" while the pedestrians are crossing. However, this traffic signal operation was changed with the RMS road widening works and the before and after signal designs are reproduced with the related SCATS count data in Appendix G (although the after design shows the Frank Street widening). "Drilling down" into the details reveals that:

the right turn movement out of Frank Street is now held for the WALK & CLEARANCE periods (24 seconds) which is significantly longer than just the WALK period (6 seconds) as per the previous (pre-widening) operation. This new signal timing reflects the proposed future circumstances when there will be

VEHICLES EGRESSING
FRANK STREET AT
VICTORIA ROAD
BEFORE AND AFTER
ROAD CLOSURE

### TRANSPORT AND TRAFFIC PLANNING ASSOCIATES

2 lanes to turn right out of Frank Street (i.e. RMS policy for 2 lane turn conflicting with pedestrians).

The evidence shows that the current queuing circumstance in the 3.0-4.0 pm period is a result of short school generated vehicle peak movements conflicting with school children crossing movements in a circumstance where the traffic signal delay (pedestrian protection) has been increased significantly from what formerly prevailed.

It is apparent that the temporary road closure has acted to increase the volume of vehicles egressing from Frank Street into Victoria Road. The queuing which now occurs in Frank Street during the afternoon school departure time has been exacerbated by the changed RMS signal provisions in relation to the protected conflict between the right turn movement and of Frank Street and pedestrians crossing Victoria Road.

# 5. MITIGATION STRATEGIES / PROPOSALS

The formal and final requirement to review the operation of the temporary road closure will occur 12 months after the change to the Tennyson Road intersection.

The potential mitigation measures are:

- RMS to be requested to change the "red for pedestrian" protection back to the former walk only period or provide more "green time" to Frank Street until such time as the Frank Street widening is completed
- the closure to be modified to permit a one-way eastbound movement.

# APPENDIX A

# TMP PROFORMA

### C. TMP FORMAT

A. Description or detailed plan of proposed measures. Is a detailed plan of the proposed measures necessary?

Yes Provided in the TMP No (state reason)

B. Identification and assessment of impact of proposed measures. Is a detailed assessment required?

Yes Provided in the Bitzios Study. No (state reason)

C. Measures to ameliorate the impact of re-assigned traffic. Is an assessment required?

Yes Cressy Street to be widened as identified in the Bitzios Study and the Victoria Road/Frank Street and Victoria Road/Tennyson Street intersections are to be upgraded.

No (state reason)

D. Assessment of public transport service affected. Is an assessment required?

Yes

No (state reason) There are no public transport services affected. Bus priority measures on Victoria Road will be upgraded as a result of the Bunnings development.

E. Details of provision made for emergency vehicles, heavy vehicles, cyclists and pedestrians.

Are these details required?

Yes Pedestrians and cyclists will not be affected. Heavy vehicles and emergency vehicles will divert via Monash Road but will still be able to access College Street via Frank Street.

No (state reason)

F. Assessment of effect on existing and future developments with transport implications in the vicinity of the proposed measures.

Is an assessment required?

Yes Assessment is provided in the Bitzios Study. No (state reason)

G. Assessment of effect of proposed measures on traffic movements in adjoining Council areas.

Is an assessment required?

Yes

No (state reason) There will be no effect in the adjoining Council areas which are at least 2km away.

H. Public consultation process.Is a public consultation process required?

Yes A comprehensive consultation was undertaken by Council and some 515 representations and letters of support were received and Council resolved to proceed with the trial closure.

No (state reason)

# APPENDIX B

# **COMMUNICATION AND CONSULTATION STRATEGY**

# 1 The trial closure of College Street – a communications and consultation strategy

### About this strategy

The purpose of this strategy is to ensure that impacted stakeholders – particularly local residents, adjacent business owners and operators and people accessing the nearby school, Holy Cross Ryde, are informed about the trial closure of College Street.

Through a proactive upfront communication approach, the element of surprise will be alleviated and stakeholders will have the opportunity to make alternative arrangements to minimise any frustration or negative impacts upon stakeholders.

### Implementation strategy

Key stakeholder meeting — Holy Cross	Offer a briefing with the project team to Holy Cross Ryde to:	Three weeks prior to commencement of works
Ryde	» establish a good relationship with the key stakeholder	
	» provide relevant information to the school, to distribute to students and school users. May also offer electronic versions of easy-to-read maps and details about the closure for inclusion in written and/or electronic school communication with students and school families.	
Key stakeholder meetings – Emergency services	Offer briefings on the changes to emergency services including Police, ambulance and fire services.	Early 2016

Newsletter / letter to stakeholders	A newsletter detailing the trial full closure to be distributed via letterbox drop to local stakeholders, including residents, local business owners/operators and the Holy Cross Ryde school community. The catchment area will be agreed with the project team.	Min. 2 weeks prior to commencement of trial full closure of College Street
	The newsletter will include:	
	» an introduction to the project and context	
	» easy-to-read maps showing traffic changes	
	» contact information for the project team (including dedicated project email address and infoline) and the City of Ryde.	
Email notification to Council database	An electronic form of the above letter to stakeholders will be distributed to stakeholders listed on the Council database, with some tailored language. Council has the email contacts of most of the people who made submissions during previous consultation phases relating to the proposal.	Min. 2 weeks prior to commencement of trial full closure of College Street (same day as the above letterbox distribution)
Project infoline	A project infoline (1800 number) will be set up to field comments, concerns and feedback from stakeholders about the trial full closure of College Street. Elton Consulting would organise set up and management of the infoline. Where necessary, the calls will be escalated to the project team for response or action. All feedback received via the infoline will be captured and reported back to the	Min. 2 weeks prior to commencement until 4 weeks following implementation.

project team for inclusion in the review of

the trial.

Project email	A dedicated project email will be set up to field comments, concerns and feedback from stakeholders about the trial full closure of College Street. Elton Consulting would organise set up and monitoring of the inbox, including providing agreed responses. Where necessary, the emails will be escalated to the project team for response or action. All feedback received via the project email will be captured and reported back to the project team for inclusion in the review of the trial.	Min. 2 weeks prior of commencement until completion of trial full closure
Newspaper notifications	Notifications / advertisements will be placed in local newspapers to advise the community about the traffic changes to College Street.	Min. 1 and 2 weeks prior to the commencement of the trial full closure  Weekly for the first 3 weeks of the trial
Online survey	Provide an online survey to capture thoughts and feedback about the trial full closure. The purpose of the survey would be to:	Available online continuously, from the commencement of the trial to completion (12 months)
	» provide useful, comparable data for analysis in the review of the trial full closure of College Street	
	» demonstrate that the project team is actively seeking feedback on the trial	
	» investigate what the traffic changes mean to key stakeholders.	
Variable message signs (VMS)	» Install two VMS units at suitable locations to the trial closure, so as to inform drivers of the closure, who may not be captured via other consultation methods.	From commencement of work until 4 weeks following implementation
Four week review	» Adjacent businesses and residents in College St will be consulted four weeks after the commencement of the pilot to understand potential issues with the new traffic conditions.	From commencement of work until 4 weeks following implementation
	» Consultation could include a door knock or online survey and a preliminary report would be provided to Council outlining feedback received.	

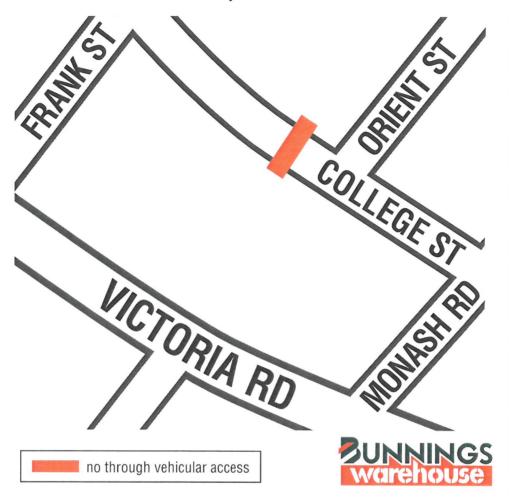

Elton Consulting would draft copy, content and graphic design of written and electronic communications listed above. Where required, the project team will provide technical input and drawings, including maps, as required.

# APPENDIX C

# **DETAILS OF LETTER BOX DROP/ADVERTISING**

# HAVE YOUR SAY

# Trial Road Closure - College Street and Frank Street, Gladesville

From midnight Sunday, 6 November 2016 barricades will be located on College Street approximately 45 metres west of the intersection of Orient Street.

During this trial period, there will be no vehicle access between College Street and Frank Street, Gladesville except for emergency service vehicles.

The traffic changes do not affect vehicle access to businesses and residential properties in College Street or Frank Street. The trial closure will assist City of Ryde to evaluate the traffic management for the new Bunnings Warehouse located at 461 – 495 Victoria Road.

Feedback can be made via an online survey at www.ryde.nsw.gov.au/haveyoursay

For more information about the trial closure, call 1800 959 965 or email BunningsGladesville@bunnings.com.au

# TRIAL ROAD CLOSURE

# Traffic changes to College St and Frank Street, Gladesville

From midnight Sunday, 6 November 2016 there will be no vehicle access between College Street and Frank Street, Gladesville.

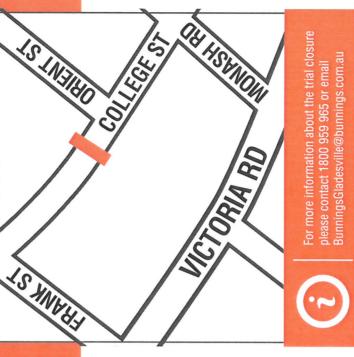

Barricades will be located on College Street approximately 45 metres west of the intersection of Orient Street. No vehicles will be allowed to travel between Frank Street and College Street, Gladesville during this trial.

The traffic changes do not affect vehicle access to businesses and residential properties in College Street or Frank Street.

The trial closure will assist Ryde City Council to evaluate the traffic management for the new Bunnings Warehouse located at 461 – 495 Victoria Road.

You can give us feedback on the trial at research.net/r/bunnings\_gladesville, or via Ryde City Council's website ryde.nsw.gov.au

no through vehicular access

		Additional comments re Tennyson Road/Sth Victoria Road: Disappointed study re traffic issues on southern side of Victoria Rd Tennyson Rd and surrounding streets under pressure from Putney development & RALC traffic Bunnings will add to current traffic issues  Even more development planned – 2-12&14 Tennyson Road PP, child care centre cnr Victoria Rd/Tennyson Rd, Primrose Hill, expansion of Putney Hill.	Tennyson Road/South of Victoria Road  The scope of the traffic study included assessment of whether or not traffic volumes will exceed acceptable growth and if so recommend mitigation measures. The traffic model identifies and quantifies traffic growth in Tennyson Rd. It also indicates that the Tennyson/Victoria intersection experiences congestion on the Victoria Rd leg in the PM peak due to the storage capacity i.e. the short distance between Tennyson and Morrison Rd.	While no amendments are required to the Planning Proposal or the site specific DCP, it is proposed to require that the proponent of any density increase in Tennyson Road or South of Victoria Road undertakes a detailed traffic study to identify issues and mitigation measures. This approach is supported by the RMS.	
			As a result of the study and traffic modelling, the consultants did not identify a need for mitigation measures in Tennyson Road/south of Victoria Road, as a result of traffic associated with the Bunnings planning proposal.		Charles Washington
99	D15/6676	(Outside LGA, regular visitor to relatives in College St)  • Concerned about speeding vehicles and additional traffic in College St  • Traffic access to College St is an issue	The traffic study puts forward two options – one-way or full closure - to reduce traffic in College St. Both options address through traffic and speeding traffic.	Refer recommendations for Submission No 1	100
29	D15/6677	Supports Full Closure Form Submission – Resident Searle St     SUPPORTS recommendations traffic study     Strongly SUPPORTS FULL closure College St, and separation of residential and industrial traffic	Refer comments on Full Closure Submission No 1	Refer recommendations for Submission No 1	
		Additional comments re Tennyson Road/Sth Victoria Road:     Disappointed study re traffic issues on southern side of Victoria Rd     Tennyson Rd and surrounding strade under program Grand Duran deciders.	Refer comments on Tennyson Road/South of Victoria Road on Submission No 65	Refer recommendations for Submission No 65	A CONTRACTOR

No.	FILE REF	Summary of Submission	Consideration of Issues	Recommendation
		<ul> <li>Council needs to consider childcare centres on College and Frank Sts</li> <li>Does not SUPPORT small one-way option because it will not sufficiently limit traffic on College St, will put residents at risk if motorist disobey the one-way – already evident at Eitham St trial one-way.</li> </ul>		
116	D15/7691	Strongly SUPPORTS Bunnings and other developments, but impact on residents is a major factor sharing the burden of traffic and noise     Hidden issues slowly changing the dynamics in the area need addressing – including:     Parking for residences     Increase in traffic flow     Access for school children – Holy Cross College     Reduction in traffic delays – am/pm school pickup/drop off     Reduction in traffic delays – am/pm school pickup/drop off     Reduce damage caused by illegal drop offs.  Suggestions re Cressy Road:     Wants Cressy Road made one-way southbound towards Buffalo Road – this will widen Cressy Rd to 2 lanes, allow parking in off peak times for at least half of Cressy Rd (currently nearly all taken up during work hours)     Limit drop off same side of road (no u-turns)     Increase flow of traffic out of Cressy onto Victoria     Allow parking in bus bay in non-school times     Eliminate traffic blockage at end of school time for students alighting buses to depart     Permit left turn at end of Cressy Rd     Achievable at minimum cost.  Applauds Council for approach, professional manner.	Victoria Rd is considered a regional road and Cressy Rd a higher order road in the road hierarchy than other local streets such as College St. As a result options such as one way were not considered by the traffic study.  The Bunnings traffic impacts will be experienced on Cressy Road as all options - do nothing, partial or full closure College St – result in increased traffic. Both options for partial and full closure College St divert traffic to Cressy Road, but mitigation measures are able to decease wait times at the northern approach to the Victorial Cressy Rd intersection and improve the intersection performance.  The mitigation measures include widening the street at the intersection. This in particular will benefit locals and reduce wait times at the lights.	Refer recommendations for Submission No 1
117	D15/7698	Strongly OBJECTS to full closure – cul-de-sac in College St     Strongly OBJECTS to full closure – cul-de-sac in College St     If the Bunnings development is only possible with full closure, then OBJECTS also to Bunnings development     One-way option would give Bunnings want they want, and residents a large part of what they want     Ouestions why changes are being considered without informing them or their neighbours     Questions why council exhibited traffic study at a time when schools and factories closed for the holidays     Understands there are two options for College St, has Council considered the following:     Full closure with a cul-de-sac would result in trucks turning at where child care centre is proposed     Cul-de-sac would result in severy restricted access for emergency vehicles – shouldn't this require clearance from the appropriate emergency authorities     Full closure would result in severe disruption to businesses – all deliveries, clients and workers reeding to enter/leave via Frank St which is already congested at times without adding Bunnings traffic     Adding issues by adding industrial traffic to Frank St used by Holy Cross College, plus two proposed child care     Refer Business Form Submission.	Preference for a one-way closure over full closure is noted. OBJECTION to full closure in College St is noted. Refer comments on BUSINESS Form Submission No 4	Refer recommendations for Submission No 4
118	D15/7701	(Resident, Tennyson Rd, Gladesville)  • Current traffic Tennyson Rd traffic at saturation, difficult to cross or gain access from driveway  • Extremely concerned regarding traffic  • Wants residents not to be inconvenienced and to be heard over the needs of big business. # 4 WEEK REVIEW SUMMARY REPORT

## Trial Road Closure of College Street 4 Week Review of Consultation -Summary Report

#### Overview

On 6 November 2016 the trial road closure of College Street was implemented.

COR's approval of the Traffic Management Plan in March 2016 required the completion of a 4 week review following implementation. This report provides a compilation of feedback received from all sources.

In November, there were seven calls to the 1800 number, three emails and 37 respondents to the online survey. City of Ryde Council received feedback from ten members of the local community. Feedback from stakeholders were generally negative and non-supportive of the road closure.

The online survey results show that most respondents were made aware of the trial via road signage. The majority of the respondents do not live in Gladesville and either work or visit businesses in Frank or College streets or travel through to another destination.

All respondents have noted the trial having a negative and/or significant impact on them.

A low number of the respondents use these streets to drop their children to Holy Cross College.

## Stakeholder and community contact via Bunnings 1800 number and email, and Gladesville Council

There were 21 contacts made with Bunnings or Council in relation to the trial road closure. A majority of the calls were from local businesses or community members complaining about the inconvenience of the road closure to access properties such as the child care or Holy Cross College.

#### Area of interest via 1800 number and email

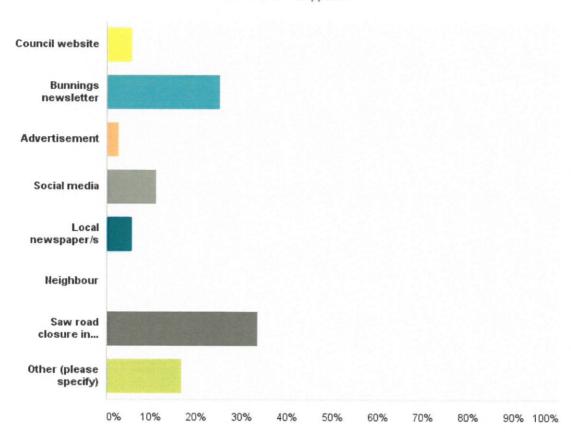

The main feedback was the inconvenience of the road closure and the increased traffic congestion to the local area as a result of the trial. Safety concerns were also raised in relation to the narrow street and the high volume of children frequenting Frank and College streets.

#### **Online Survey**

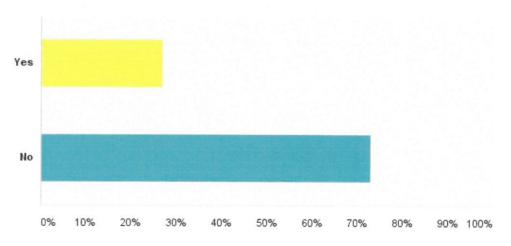

# Q1 How did you first become aware of the trial road closure?

Answered: 36 Skipped: 1

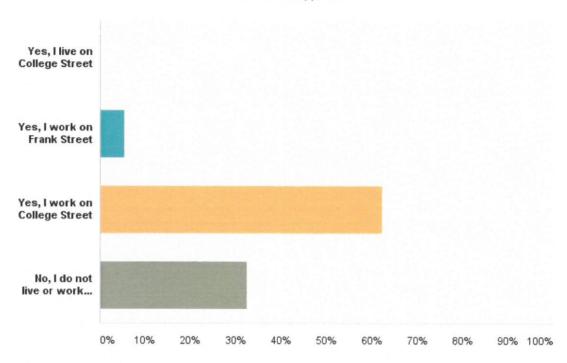

### Q2 Do you live in Gladesville?

Answered: 37 Skipped: 0

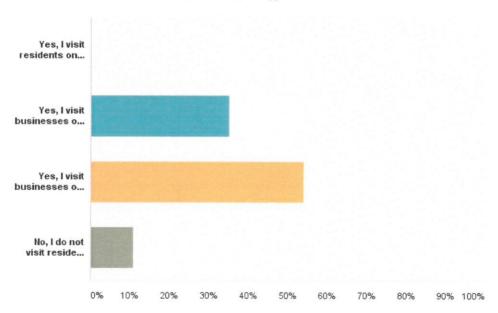

# Q3 Do you live or work on Frank Street or College Street, Gladesville?

Answered: 37 Skipped: 0

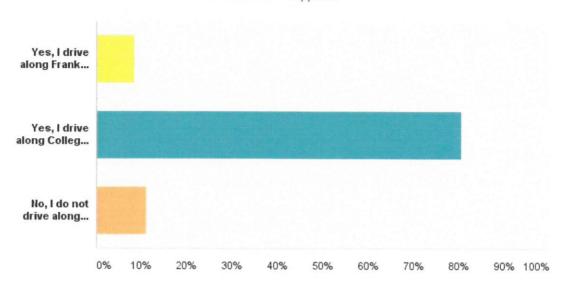

## Q4 Do you visit residents or businesses on Frank Street or College Street, Gladesville?

Answered: 37 Skipped: 0

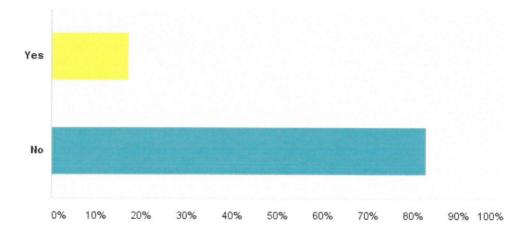

# Q5 Do you drive along Frank and/or College streets to get to other destinations?

Answered: 36 Skipped: 1

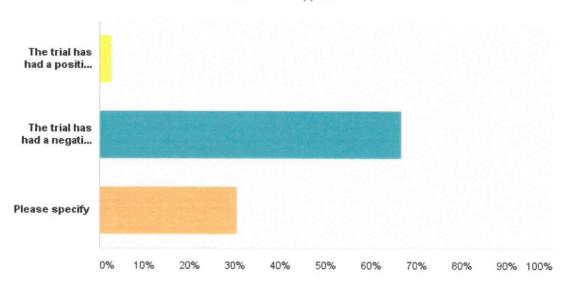

# Q6 Do you use the Frank/College streets to pick up/drop off children attending Holy Cross College?

Answered: 35 Skipped: 2

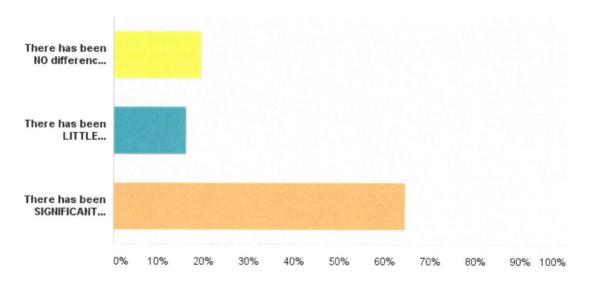

# Q7 Which of the following statements captures your views on the trial road closure?

Answered: 36 Skipped: 1

# Q8 How has the trial changed traffic in the local area?

Answered: 31 Skipped: 6

Project No: P1688 Version: 004 Page v

#### 1. INTRODUCTION

#### 1.1 BACKGROUND

Gladesville is located within the City of Ryde, approximately 12km north-west of the Sydney CBD. The suburb is made up of residential, commercial, light industrial, retail, schools and recreational areas. In recent years, there has been significant redevelopment interest and there are currently a number of 'live' planning proposals, including one lodged by Bunning's Group Limited in March 2012 for amendments to the Ryde Local Environmental Plan 2010 (RLEP2010) to enable a Bunning's Warehouse and adjacent Bulky Goods Retail development (hereafter referred to as the "Bunnings Site") at 461-495 Victoria Road.

There is an emerging potential for a significant increase in traffic in the area. Victoria Road is already heavily congested in peak periods, with long delays observed in the eastbound direction in the morning peak, and westbound in the afternoon peak. This has resulted in the increasing use of parallel routes such as Morrison Road and Buffalo Road with traffic filtering through to the next order of roads such as College Street, Orient Street and Eltham Street as well. Increasing through traffic volumes is also placing pressure on a number of lower order north-south links between Victoria Road and its parallel routes.

Plans for further development under the potential in the LEP, including the Bunnings proposal, are raising concerns in the local community regarding associated traffic and parking impacts. Measures will be required to manage traffic volumes in residential streets but also on the higher order road network whilst maintaining business and residential accessibility and catering for pedestrians, cyclist and buses.

#### 1.2 PROPOSED SITE

The proposed Bunnings development site is located at 461-495 Victoria Road, and is bounded by Frank Street to the west and College Street to the north. The broader study area is bounded by Higginbotham Street / Thompson-street to the north, Pittwater Road / Meriton Street to the east, Morrison Road to the south, and Charles Street to the west. A map of the study area is shown in Figure 1.1.

Figure 1.1: Study Area and Subject Site

Project No: P1688 Version: 004 Page

The 3.83 hectare site was occupied by a variety of light industrial and commercial buildings. It is situated near the Holy Cross College Ryde, Gladesville Business Park, Ryde Aquatic Leisure Centre and a Fitness Centre.

A separate Development Application associated with the Bunnings site has been lodged to construct a new vehicle crossing at the intersection of Victoria Road and Tennyson Road. This proposal includes the demolition of an existing industrial building and construction of a new vehicle ramp from Victoria Road down to the ground level of the proposed Bunning's Site.

Also, the Bunnings Site has dedicated land across its Victoria Road frontage to allow for the widening of Victoria Road to provide a continuous bus lane in each direction through this section.

#### 1.3 PURPOSE OF THE STUDY

Bitzios Consulting has been commissioned by the City of Ryde to develop traffic and parking strategies to manage the performance of the network in the future as growth throughout the study area occurs. The study has a particular focus on immediate impacts and needs generated by the development of the Bunnings Site but considers these impacts in the context of the cumulative impact of all expected development in the study area to 2031. Year 2031 is a common future assessment year used in similar studies reflecting a typical horizon for which planning and growth information is available. Both traffic and parking impacts have been assessed.

As part of this study, a traffic model was developed for the study area to quantify the impacts of the proposed development in the study area and determine to test a variety of mitigation measures. The key outcomes of the study are a recommended traffic network improvement strategy including implementation responsibilities and timeframes as well as a parking management strategy.

#### This report describes:

- the existing traffic and transport system (Chapter 2);
- the data collected for this study (Chapter 3):
- the development of the traffic model (Chapter 4);
- an assessment of the existing traffic and parking issues (Chapter 5);
- the calculation of development-related traffic volumes and parking demands (Chapter 6);
- the development of the future year traffic models and the identification of "do nothing" traffic conditions in 2031 (Chapter 7);
- the testing of mitigation treatments to manage future traffic issues (Chapter 8);
- the culmination of the modelling and evaluation in a preferred network strategy (Chapter 9) and a Parking Strategy (Chapter 10); and
- Conclusions (Chapter 11) and summary recommendations (Chapter 12).

#### 1.4 STUDY PROCESS

The study process has been divided into four stages, namely:

- Stage 1: Data Collection and Validation;
- Stage 2: Model Development and Calibration:
- Stage 3: Options Development and Testing; and
- Stage 4: Plan Development, Consultation, Staging and Reporting.

The study process and tasks associated with each stage is shown in Figure 1.2.

Prior to the Final Report (this report) being submitted, the Draft Report and study recommendations were considered by Council at its meeting of the 28th April 2015. Council's resolution from this meeting is contained in Chapter 13.

Project No: P1688 Version: 004 Page 2

#### 8. MITIGATION TREATMENTS TESTING

#### 8.1 OBJECTIVES

In most traffic and transport studies, the focus in on providing sufficient capacity in the network to cater as best as possible for future year traffic increases. Whilst this was a key consideration for this study, the study also targeted ways of reducing the use of local streets by through traffic and ensuring that additional development in the area did not exacerbate current levels of usage of local streets by through traffic. The aim therefore was, through recommended infrastructure interventions, to encourage the right type of traffic on the streets/roads most appropriate for carrying this traffic.

At a Community Forum on the 28th of August 2014 at the City of Ryde Civic Hall to introduce the study, the overwhelming feedback from the community was the need to preserve street amenity as development (and particularly the development of the Bunnings Site) occurred in the area. The consensus feedback from the meeting was that the collected data and model reflected the existing situation effectively and that amenity impacts were of greatest concern related to increasing traffic volumes in residential streets during week-day off-peak periods and weekend periods.

This feedback was critical in shaping the treatments assessed to mitigate impacts and for generating the preferred traffic network strategy. The options development process subsequently considered methods to prohibit or restrict through traffic using local streets and consequentially to introduce infrastructure upgrades on the higher order road network to cater for the traffic diverted out of residential areas due to these measures.

Before identifying local upgrades and treatments to test in the model and evaluate thereafter, it was important to clearly define the objectives of the upgrades or management measures being considered.

The primary objectives of the mitigation treatment testing and options development are outlined as follows:

- to minimise the impacts of development traffic in residential streets, particularly in off-peak times;
- to optimise traffic operations during peak periods on through traffic-carrying roads within the study area;
- to limit the impact of parking demand growth on residential streets whilst allowing business to prosper;
   and
- to improve pedestrian safety and convenience.

#### 8.2 TREATMENT OPTIONS

Given the objectives listed above, treatment options needed to be considered at two levels, namely:

- localised treatments at specific locations that aim to address a particular traffic issue in accordance with the objectives above (both amenity and capacity objectives); and
- combinations of localised treatments that logically "work together" to form a network of improvements.

A total of 13 localised treatments were generated by the study team in consultation with the project steering group for testing to address the identified issues in accordance with the objectives. These treatments and their reasoning are listed in Table 8.1.

Project No: P1688

Table 8.1: Treatments Options

No.	Treatment	Reasoning
1	Cressy Road approach to Victoria Road – widened to 2 lanes (double right turn)	To offset the impacts of any closure/one-way scheme tested in Frank Street or College Street.
2	New link - Frank Street to Buffalo Road	To offset the impacts of any closure/one-way scheme tested in Frank Street or College Street.
3	Speed management scheme : Higginbotham-Thompson	To better manage the identified speed and traffic safety issues in this street.
4	College Street closed just west of Orient Street	To effectively ban through traffic to/from the Frank Street/Victoria Road intersection from using College or Orient Streets.
5	College Street/Eltham/Monash signals	To overcome issues with traffic not being able to safely exit side streets in peak periods, as well as to provide formalised pedestrian crossing opportunities as this area redevelops.
6	Ryde Road/Monash Road signals	To test if signalisation of this intersection improves operations locally and in the broader area.
7	Monash approach to Victoria Road widened	To see whether an additional (third) lane at this approach will appreciably reduce delays at peak times.
8	Signalised right turn from Victoria to Westminster	To see whether introducing this turn takes pressure off the right turn into Monash Road to and understand the consequential impacts and benefits of this.
9	Close Eltham east of Westminster	To see what impacts this closure would have on local traffic circulation and congestion.
10	Eltham Street one-way eastbound between Aldi and west of the Oxford/Westminster roundabout	To see what impacts this closure would have on local traffic circulation and congestion.
11	Afternoon peak right turn ban from Victoria into Jordan Street	To see what benefits might accrue to through traffic by taking this opposing movement away at peak times, to facilitate more northbound green time.
12	Frank Street left in/out at Victoria and new 4 way signals at Weaver/Victoria/Bunnings (all movements)	To test an alternative Bunnings Site access arrangement opposite Weaver Street rather than opposite Tennyson Road, to understand the pros and cons of this arrangement.
13	Frank Street access for Bunnings	A theoretical "what if" scenario should for some unforeseen reason access not be available off Victoria Road.

#### 8.3 LAND USE SCENARIOS AND MODEL RUNS

The treatment option testing was modelled across three different land use scenarios (as also discussed previously in Section 7.1). The three land use/development scenarios tested were:

- Scenario 1: Bunnings Site development only;
- Scenario 2: All other expected development only (i.e. without Bunnings Site); and
- Scenario 3: Bunnings Site + all other expected development.

These land use scenarios were necessary to isolate the Bunnings Site impacts from impacts caused by other development in the area, as well as to understand cumulative impacts of all development.

A total of 14 network options were subsequently created as combinations of land use scenarios and local treatment options. These network options and model run combinations are presented in Figure 8.1. Figure 8.2 shows the locations of the localised treatment options.

Project No: P1688 Version: 004 Page 47

#### 11. CONCLUSIONS

The Gladesville area is growing with many new residential, commercial, and retail developments planned through to 2031 and some already well into their construction phase. With the Gladesville area already experiencing some amenity and congestion issues associated with through traffic, these new developments, including the Bunnings Site development, will impact the traffic and parking across the broader road network. Traffic modelling undertaken has identified that these issues will be exacerbated unless a Traffic Management Plan is put in place.

This outcome was determined through modelling a "Do Nothing" scenario, where no mitigation measures were put in place. The issues observed from the modelling results as well as the major concerns raised by members of the community, are summarised as follows:

- through traffic from new developments, specifically the Bunnings Site development, accessing local residential streets;
- congestion and long traffic queues observed along Victoria Road corridor across all three peaks (AM, PM and Saturday peak periods) with concerns that more development will result in more congestion; and
- Saturday peak traffic growing significantly as a result of new development, particularly the retail development proposed in the Victoria Road corridor.

Based on an assessment of the current and expected future traffic and parking issues within the study area, as well as considering community input, the key objectives for "designing" mitigation treatments were identified as:

- to minimise the impacts of development, commercial, industrial and retail traffic in local residential areas, particularly in off-peak times;
- to optimise traffic operations in the study area during peak periods;
- to limit the impact of parking demand growth on residential streets whilst allowing business to prosper;
   and
- to improve pedestrian safety and convenience.

The most effective mitigation measures to achieve the above objectives involved a combination of full and partial street closures, intersection upgrades and Local Area Traffic Management (LATM) Schemes. Through consideration of the modelling results and the assessment of various treatment options, in consultation also with the community and the study steering group, a preferred traffic network was generated.

The main purpose of the preferred network which followed the treatments testing was to address existing and forecast capacity and amenity issues identified during the study process as best possible given the geometric and property constraints in the area. The draft preferred network was run through the Aimsun traffic model, and the results demonstrated that many of the current and expected future amenity issues in the study area will be overcome primarily surrounding the Bunnings Site development. The impacts of additional development on the operations of the major road network can also be effectively managed with targeted upgrades.

The preferred network effectively prohibited movements to/from the Bunnings Site and Victoria Road via Orient Street-College Street-Frank Street and essentially splits College Street into a light industrial section and a residential section. A one-way scheme in Eltham Street (eastbound movements allowed only) reduced traffic in this road as well whilst signalising the Monash Road/Eltham Street intersection will improve capacity and safety in this area for vehicles and pedestrians.

Other measures such as the new right turn into Westminster Road from Victoria Road and the extra turning lane for turning out of Cressy Road to Victoria Road augments existing turning capacity to cater for increased development demands and traffic diverted away from local residential streets. Also, a LATM scheme in Orient Street and in the Higginbotham-Thompson corridor will act to discourage speeding and improve safety for all road users. A new local roundabout is also proposed at the Monash Road/Buffalo Road intersection.

Project No: P1688 Version: 004 Page 73

Traffic modelling of the preferred network showed achievement of the following key objectives:

- reducing through traffic on residential streets, including College Street, Eltham Street, and Orient Street;
- preventing any Bunnings Site related traffic from accessing residential streets including College Street, Eltham Street, and Orient Street, with minimal traffic accessing residential streets south of Victoria Road:
- preventing the pre-existing issue of westbound and eastbound "rat-running" through College Street and Eltham Street at all times of the day and week;
- separating College Street into industrial and residential sections, and effectively reducing the number of heavy vehicles accessing the residential section, including Orient Street;
- improving the safety and efficiency of intersections on Monash Road, especially as development is expected to increase nearer to Victoria Road, generating more pedestrians to and from this area; and
- optimising the major through traffic movements on Victoria Road during peak times.

Whilst more traffic is expected on Morrison Road and Tennyson Road further south, the Tennyson Road traffic is mostly associated with a new major development proposed at 2-14 Tennyson Road. The Morrison Road corridor has attracted through traffic for some time now and is related to a broader issue of congestion on most of the length of Victoria Road through Gladesville and Meadowbank.

The closure of College Street results in more traffic using Cressy Road to head north-south and there is a minor reduction in impact on Cressy Road traffic if College Road only has a one-way threshold treatment to allow eastbound movements only. In any event, Cressy Road is a major collector road to access Victoria Road, and with development and background growth expected to increase, it is evident that more traffic will be diverted to Cressy Road to Victoria Road. Furthermore, it is more appropriate for a road such as Cressy Road, as it is a current bus route and major collector road, to cater for the expected additional traffic compared to this traffic funnelling through other lower order residential streets.

Heavy Rigid Vehicle turning path assessments for each light industrial driveway in College Street have identified that these vehicles will be able to drive in or reverse in to driveways under the proposed new cul de sac arrangement. There are benefits to both truck traffic and pedestrians in this area of the full closure through the removal of passing traffic.

In terms of expected parking impacts, the Bunnings Site development concept (submitted with the planning proposal) includes well in excess of its on-site parking requirements and the potential for on-street parking by staff and customers is minimal. Other development in other areas may however impact on heavily used on-street parking areas and methods to manage this include:

- line marking of parking bays where simple parking lanes currently exist;
- introduction of more time-regulated parking areas near commercial development; and
- introduction of metered parking as needed near new retail areas.

In addition, there may be the opportunity in Eltham Street (where the trial one-way scheme is being introduced) to use the spare road space for 45 degree parking, particularly as retail/commercial development moves into the southern side of Eltham Street.

In terms of future development in the area, it will be important that it provides its parking in accordance with the rates in Council's DCP so that the risk of overspill into already heavily parked areas is minimised.

Overall, should the recommended upgrades identified in Chapter 12 be implemented, then the impacts of development traffic, and particularly Bunnings Site traffic, will be effectively managed to ensure the right types of traffic and parking in the right types of streets, and that sufficient capacity at major intersections is provided to manage the impacts of traffic growth.

 Version: 004
 Page 74

#### 12. RECOMMENDATIONS

#### 12.1 TRAFFIC

The key infrastructure elements of the preferred network and recommended apportionment of responsibilities of these elements (and timing) are summarised in Table 12.1.

Table 12.1: Recommended Infrastructure, Responsibilities, and Staging of Works

	Preferred Network Element	Responsibility	Reasoning	Staging
1	College Street closure separating the industrial complex and residential complex	Bunnings Site	To stop Bunnings traffic accessing the site via Orient-College-Frank	(*) Stage 1 of Bunnings Site development
2	Cressy Road widened to two lanes to allow double right turn into Victoria Road	Bunnings Site	A consequential impact of Item 1	(*) Stage 1 of Bunnings Site development
3	Proposed Bunnings access point at Tennyson Road	Bunnings Site	Required for primary access	(*) Stage 1 of Bunnings Site development
4	New signalised intersection at Monash/College/Eltham	Future Development	Due to local development growth	As development occurs
5	Eltham Street one-way eastbound between Aldi and commercial development	Future Development	Due to local development growth	As development occurs
6	No parking on Monash Road (eastern side) south of Eltham Street during all peaks	Future Development	Due to local development growth	As development occurs
7	Introduce signalised (non-filtered) right turn into Westminster Road from Victoria Road	Future Development	Due to local development growth	As development occurs
8	Ban right turn into Jordan Street from Victoria Road during PM peak	Future Development	Due to local development growth	As development occurs
9	New roundabout at Buffalo Road / Monash Road intersection	City of Ryde	Cumulative impact, existing issues and safety concerns	Subject to CoR programing
10	LATM measures in Orient Street	City of Ryde	Cumulative impact, existing issues and speed management	Subject to CoR programing
11	Speed management scheme in Higginbotham/Thompson corridor	City of Ryde	Cumulative impact, existing issues and speed management	Subject to CoR programing

<sup>(\*)</sup> Prior to issue of any "staged" or "interim" occupational certificate.

#### 12.2 PARKING

The following recommendations have been made regarding parking in the study area:

- any new development in the study area be required to provide its full parking requirement in accordance with the DCP parking rates of City of Ryde (and City of Hunters Hill if outside of CoR);
- parking rates for new developments not be reduced as part of any short-to-medium term review of the DCP;
- new parking duration restrictions be put in place in areas adjacent to and surrounding proposed commercial and retail developments as future development occurs;
- line-marking of parking bays throughout the study area, where on-street parking is provided via a parking lane and is heavily occupied. This achieves a cost-effective use of street space; and
- further investigation be undertaken into accommodating additional on-street, 45 degree angled parking
  on the road space generated by the proposed Eltham Street one-way scheme (subject to the
  impending trial of the one-way scheme being successful).

Project No: P1688 Version: 004 Pa

#### 13. COUNCIL DECISION

Council considered the draft of this report, along with the Council Officer's report (see Appendix H) and community representations at its meeting of the 28th April 2015. At that meeting Council made the following resolution (also see Appendix I):

- a) That Council exercise the delegation issued by the Minister for Planning and Infrastructure to make the planning proposal to amend the land use zone applicable to 461-495 Victoria Road from IN2 Light Industrial to B5 Business Development and the permissible height under Ryde Local Environmental Plan (LEP) 2014 applicable to the site from 10m to RL63, RL52 and RL42 (stepping down from 12-15m on Victoria Road to approximately 7-17m on College Street).
- b) That in making the LEP amendment Council will adjust the exhibited map site boundaries to reflect the Victoria Road widening in accordance with recent subdivision approval to create LOT 300 DP 1194688, 461-495 Victoria Road, Gladesville.
- c) That Council adopt the following for inclusion in the Bunnings Gladesville Traffic and Parking Study:
  - i. Trial full closure of College Street to be implemented prior to Bunnings commencing construction (at no cost to Council by Bunnings). The trial shall be reviewed after 12 months of operation of the Bunnings store and the results reported back to Council at that time. The applicant shall cover the full cost of the traffic review, surveys and any supporting technical studies
  - ii. Cressy Road carriageway widening to be implemented prior to Bunnings commencing operations (at no cost to council by Bunnings)
  - iii. Cressy Road (eastern side) full width footpath and safety fence from Victoria Road corner to Holy Cross College entry to be implemented prior to Bunnings commencing operations (at no cost to council by Bunnings)
  - Tennyson Road and Frank Street site access to be implemented at stage 1 and operable on commencement of Bunnings operations (at no cost to Council by Bunnings)
  - v. Traffic signals changes and site access at Tennyson Road to be implemented prior to Bunnings commencing operations (at no cost to Council by Bunnings)
  - vi. Pedestrian and road safety audit and management plan be prepared that considers the high probability that parents will park at Bunnings to pick up school children or for access to sporting fields (at no cost to council by Bunnings) and also to consider the impact of the two proposed child care centres in that location
- vii. A parking optimisation plan for Frank Street and College Street between Frank Street and Orient Street be prepared to counteract any loss of parking due to the Bunnings development and implemented (at no cost to Council by Bunnings)
- viii. Roundabout at Monash/Buffalo Road intersection.
- ix. Detailed study into the impacts of a right hand turn at Westminster Street and a right hand turn ban during the evening peak at Jordan Street from Victoria Road (at no cost to Council developer funded)
- x. Detailed study into the traffic and parking impacts be undertaken for any proposed rezoning that includes land use changes and increased densities for sites adjoining Tennyson Road. The aforementioned traffic and parking impact study is to be modelled on the Bunnings Gladesville Traffic and Parking Impact Study in terms of its scope and deliverables. (at no cost to Council – developer funded).
- xi. An additional traffic and parking study, as detailed in part (x) above, be undertaken for the area bounded by Pittwater Road to Monash Road and Ryde Road to Victoria Road. (at no cost to Council developer funded).
- d) That a Roundabout at Monash/Buffalo Road intersection be included in the 2016/2017 City of Ryde Delivery Plan with the funds drawn from the Section 94 reserve.
- e) That Council refer the following matters to the Traffic Committee for consideration:
  - i. Speed management for the area bounded by Cressy, Pittwater, Higginbotham and Victoria Roads
  - ii. Parking optimisation for Eltham Street
- f) That Council adopt a site specific Development Control Plan for 461-495 Victoria Road Gladesville amended in accordance with the above changes in the Bunnings Gladesville Traffic and Parking Study.
- g) That Council delegate the General Manager to make amendment to the site specific Development Control Plan for 461-495 Victoria Road Gladesville to implement Council's resolutions prior to notifying the plan in accordance with the Environmental Planning and Assessment Act.
- h) That Council notify all community members who made a submission regarding the planning proposal of the outcomes and thank them for taking the time to become involved in local planning.

Project No: P1688 Version: 004 Page 76

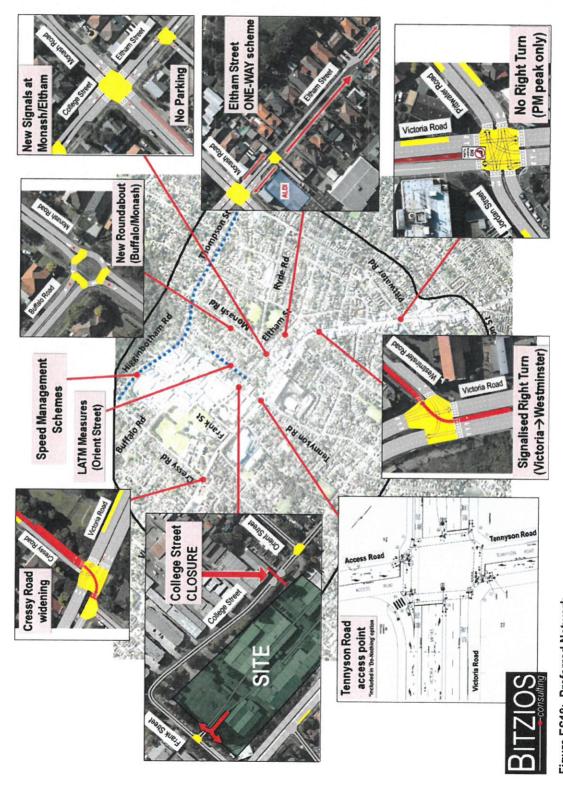

Figure ES18: Preferred Network

Project No: P1688

#### MODELLING RESULTS FOR THE PREFERRED OPTION

The preferred network was run in the Aimsun traffic model to test its combined performance, any refinements to intersections required and to determine if the objectives of reducing through traffic off local streets was achieved, whilst managing peak operational performance on the major road system.

Results from the preferred network option modelling were compared with the "Do Nothing" option. It is important to note that the preferred network was tested as two separate options for comparison purposes, namely:

- Preferred Option A: the preferred network with the College Street one-way scheme in place and existing
  priority intersection at Buffalo Road / Monash Road intersection; and
- Preferred Option B: the preferred network with adjustments following community feedback (i.e. with College Street full closure and new roundabout at Buffalo Road / Monash Road intersection).

The results show that the two preferred network options A and B effectively bring traffic volumes on College Street, Orient Street and Eltham Street back to similar levels as in 2014 weekdays, even with all of the proposed development in place by 2031. Both options also effectively prevent traffic associated with Bunnings accessing these residential streets. The Preferred Network Option B, with the full closure of College Street, means that volumes on College Street west are limited to only traffic coming into and out of the industrial sites off College Street. The closure also reduces the use of College Street as a 'rat-run', which was an issue evident in both directions in the 2014 base case and the 2031 "Do Nothing" case.

The consequence of the preferred network through closing College Street, or implementing a one-way scheme is that volumes increase on Monash Road, Cressy Road and Victoria Road in particular to accommodate the diverted traffic, particularly seen during the Saturday peak. These results are shown in Figures ES19-ES22. These roads however are more appropriate to absorb this additional traffic from an amenity impact perspective.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab). Vehicle movement LOS values are based on average delay per movement.

Intersection and Approach LOS values are based on average delay for all vehicle movements.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.
